Subject: Key Sustainability Priorities for Marketing Communications

Dear Marketing Team,

I'm sharing a brief summary of IHH Healthcare's key sustainability progress from the 2024 Sustainability Report to support upcoming marketing campaigns and corporate communications.

The most marketable highlights include:

- **Planet:** 3.2% reduction in greenhouse gas emissions intensity per patient day, despite business growth.
- **Environmental Impact:** Up to **55% reduction in environmentally harmful anaesthetic gas usage** and continued reduction of single-use plastics across markets.
- **Renewable Energy:** Continued investment in renewable energy and climate resilience as part of IHH's **Net Zero 2050** commitment.
- **People:** Progress in employee well-being, diversity and talent development.
- **Patients & Public:** Continued community healthcare programmes that improve access to care and support healthier communities.

Recommended next steps:

Please incorporate these verified achievements into relevant campaigns and sustainability messaging. Kindly coordinate with the Sustainability and Corporate Communications teams before publishing any ESG-related claims to ensure accuracy and consistency.

Timeline:

Please review these key messages and identify suitable upcoming campaigns by **28 August 2026**. Proposed sustainability-related content can then be aligned and reviewed by **4 September 2026**.

These points can help strengthen IHH's sustainability narrative and demonstrate how "**Care. For Good.**" extends beyond patient care to our people, communities and the planet.

Best regards,
Business Analyst
IHH Healthcare
